# Accelerating a Dual-source Strategy to Protect Medicine Supply

## SCENARIO

Following widespread supply chain disruptions, a global pharmaceutical company sought to reduce reliance on a single resin supplier by establishing a dual-source strategy. However, limited capacity and resources created a challenge in moving the program forward.

## INNOVATION

Ecolab's Bioprocessing Applications Lab provided the additional lab capacity and technical expertise needed to accelerate the program, supporting tech transfer and conducting performance comparison studies of Purolite™ Resins across multiple molecule.

A cross-functional Ecolab team also provided regulatory guidance, helping **save six months** in regulatory filing time while reducing resin costs.
