

360° Performance Protection for Small Cooling Systems

3D TRASAR™ TECHNOLOGY FOR COOLING WATER: COMPACT PROGRAM

When a small cooling water system runs inefficiently or fails, the result is increased cost and unplanned maintenance, repairs and/or replacement of assets.

How the 3D TRASAR for Cooling Water Compact Program delivers:

- Easily monitor system performance through our mobile app while Nalco Water representatives manage alarms and document service actions on- or off-site
- Reporting and documentation through Service Intelligence, powered by ECOLAB3D, supports adherence to local pathogenic regulations where applicable
- 24/7/365 Ecolab Global Intelligence Center support with degreed engineers to remotely monitor and help resolve performance issues

SMART EQUIPMENT + REAL-TIME INSIGHTS

The Best in Technology

SMART EQUIPMENT: Flexible, cost-efficient controller is designed especially for small cooling systems and communicates critical data for quick detection of issues

REAL-TIME INSIGHTS: Clear, convenient and continuous visibility into system status and KPIs, plus real-time alerts and alarms to drive swift action

World-Class Support

ENHANCED SERVICE: Our mobile app delivers continuous performance insights to help you address critical issues quickly; remote configuration drives expedited response; action log creates documentation to support peace of mind

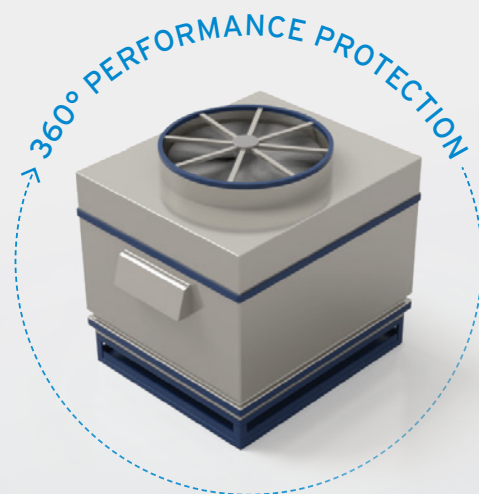

EXTENDED SUPPORT: Upgrade to always-on alarm management and response with our optional Remote Intelligence hypercare service

Get Peace of Mind with the 3D TRASAR™ for Cooling Water Compact Program

This 360° program helps safeguard system performance through a combination of smart equipment, real-time insights, on-site service and extended support from the industry's water treatment leader.

24/7/365 monitoring and support

Increased visibility into system performance supports swift, targeted response to critical issues
