

Brown Marmorated Stink Bug (BMSB) Service

BMSB are a nuisance pest

Ensure delivery of your goods and meet seasonal measures

Ecolab is a registered treatment provider approved by the Australian Department of Agriculture (DOA) and the New Zealand Ministry for Primary Industries (MPI) to perform BMSB fumigations. Actions have been put in place to mitigate risk and treat for BMSB from September 1 to April 30.

Protect your at-risk shipments

All goods manufactured in or shipped from the United States, and vessels that berth at, load or transship from the United States are subject to seasonal measures.

Early convenient treatment centers

Our treatment sites are located near most ports. We also offer mobile treatment options.

High-security container seals

Once Ecolab fumigates a container, the Australian DOA attaches a high-security seal and designates the shipment as "high-priority."

Expert fumigators

Our national network of expert fumigators continually demonstrates our capacity to conduct BMSB treatments and fumigations with Sulfuryl Fluoride and Methyl Bromide. We know the target high-risk goods, understand the regulations and meet all standards.

Ecolab SOPs are approved by the Australian DOA

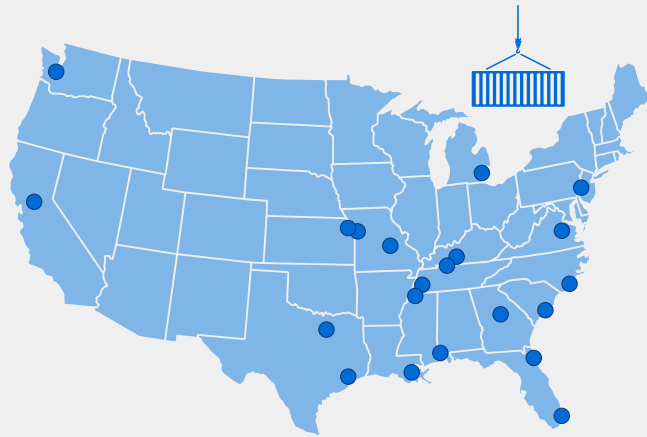

Treatment documents are uploaded to Australia promptly

Ecolab has 16 approved BMSB treatment centers in the United States

Container Fumigation Locations

Ecolab locations included on the below list perform container fumigation and other services.
