

LARGE FLY PROGRAM

Protect Your Reputation and Guests

Gain Confidence and Safeguard Your Business

- ✓ **HIGHLY-TRAINED** Service Specialists
- ✓ **SCIENCE-BASED**, outside-in approach
- ✓ **PROGRAM TAILORED** to location needs
- ✓ **FAST SERVICE** response time

ECOLAB®

Reduce Pressure Outside. Eliminate Flies Inside.

The Ecolab Large Fly Program tackles the root causes of fly activity for a fly-free environment – helping protect your bottom line, food safety, guest satisfaction and ultimately your brand.

Large flies pose a large threat to food safety and your business. They also damage your brand with customer complaints, negative reviews and low audit scores. Inviting smells and increases in outdoor dining, open-air seating and take-out options have increased fly problems for many businesses.

FULL OF BACTERIA

6 MILLION on body
25 MILLION internally

FOOD SAFETY THREAT

House flies carry **100+ pathogens**¹ – transmitting cholera, typhoid fever, diphtheria, dysentery, *E. coli* & *Salmonella*

BRAND REPUTATION RISK

Visible flies disrupt guest experience and impact employee satisfaction

ELIMINATE large fly activity with professionally applied and targeted interior treatments and regularly serviced equipment

PREVENT large fly entry through service inspections and actionable insights

REDUCE

large fly pressure with regular service to fly traps and equipment and application of exterior treatments

Our highly-trained Service Specialists follow science-based protocols using targeted treatments, proprietary equipment, and proven inspection techniques to deliver insights that solve fly problems – helping to prevent risk and eliminate flies.

Identifying Risks and Recommending Corrective Actions

During regular service visits, Service Specialists leverage their expertise to provide insights and recommendations to identify and prevent risks of fly activity. They go above and beyond by suggesting improvements you can make in your operations to reduce large fly pressure – a customer and specialist partnership to keep your facility fly-free.

MINIMIZE ENTRIES

We inspect for structural and sanitation issues that lead to large fly pressure, then make recommendations and coach you on how to limit fly entry.

ELIMINATE ACTIVITY

We treat common interior resting sites such as cords, corners/edges, windows, and garbage areas to eliminate flies in high activity areas.

CASE STUDY: Large Fly Program helps quick service restaurant reduce large fly population better than a fly light program alone.

EXTERIOR SOLUTIONS

Our dedicated research of fly behavior informs our development for treatment and equipment deployment to trap flies and distract them from entrances.

INTERIOR SOLUTIONS

The Ecolab RD&E team is focused on developing the best interior baiting techniques and equipment for both high-pressure and small footprint areas that blend into surroundings.

Equipment to Support an Outside-in Approach

EXTERIOR

INTERIOR

STEALTH™ FLY STATION

Combines an odor attractant and a visual attractant to divert and eliminate flies

Fly Mortality by Commercially Available Devices – after 1 hour, Independent Ecolab data

Stealth Fly Station 88.8%

Fly Baiter 20.1%

Scattered Bait 18.0%

Stationary Bait Trap 3.0%

Fly Stick 2.0%

Control 0.0%

STEALTH™ MAXIMA FLY LIGHT

Uses proven technology to control flies indoors for back-of-house and areas with high fly pressure

Traps up to
1,000
large flies

STEALTH™ COMPACT FLUORESCENT LIGHT

Provides optimal solution for front-of-house or areas with a small footprint

FLUORESCENT LIGHT technology catches more flies**

**Lab testing indicates the CFL catches more flies in a head-to-head comparison than comparative style ILTs
