

Top Sanitation and Structural Risks

Pests can enter your facility through holes and cracks as small as a 1/4" in size

They hide and breed in tiny cracks and crevices you may not even be aware of

Sanitation issues are major contributors to infestations in facilities and act as breeding sites for certain pests

BECOMING AWARE of the TOP 3 SANITATION AND STRUCTURAL PEST RISKS can help mitigate your pest risk and help protect your customers and your business.

SANITATION Risks

Dirty Floor Drains

Food Debris on Floor

Dirty & Open Trash Cans

Solutions

Cleaning Drains Weekly

Clean drains and traps using an industrial drain cleaner and a stiff long-handled brush. Use a "snake" device in clogged drains to clean out all gelatinous material.

Dispose of Rotting Food Matter

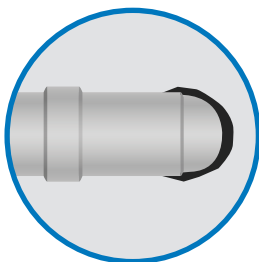

Pick up all food matter on the floor and be sure it is disposed of in the appropriate container.

Keep Trash Areas Clean

Keep trash bins away from the building when possible; close receptacles with tight-fitting covers. Keep the exterior dumpster pad free of spillage and debris.

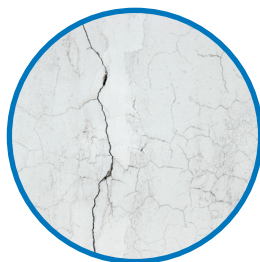

STRUCTURAL Risks

Gaps Around Pipes

Gaps Under Doors

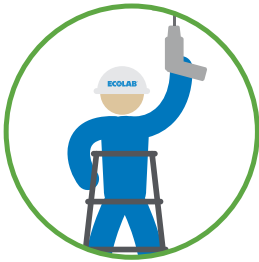

Holes in Walls

Solutions

Install/Replace Damaged Door Sweeps

Install a barrier to keep pests from entering your facility through gaps under your doors.

Repair Gaps & Voids

Fix gaps and voids around pipe chases to eliminate pest entry points and cut off harborage areas where pests can live.

Repair Holes & Gaps

Find and repair holes and gaps in walls and ceilings to eliminate pest entry points and cut off harborage areas where pests can live.
